

Exercise: Add Cj Items

Add Cj Items to HTML

- Update the “items()” function to emit all data elements

```
// CJ item data here
dd = d.node("dd");
for(var data of item.data) {
  p = d.data({
    className:"item "+data.name,
    text:data.prompt+"&nbsp;",
    value:data.value+"&nbsp;"}
  );
  d.push(p,dd);
}
```

Extra Credit: Item Links

- Add support for
Item-level Links

```
// cj item links here
if(item.links) {
  for(var link of item.links) {
    p = d.node("p");
    p.className = "item";

    // render as images, if asked
    if(isImage(link)===true) {
      img = d.image({
        className:"image "+link.rel, rel:link.rel,
        href:link.href}
      );
      d.push(img, p);
    }
    else {
      a = d.anchor({
        className:"item", href:link.href,
        rel:link.rel, text:link.prompt}
      );
      a.onclick = httpGet;
      d.push(a, p);
    }
    d.push(p, dd);
  }
}
```
