# Exercise
Support Cj Queries

Support Cj Queries for HTML

- Update the queries() function to support Cj queries

(see next page)

```javascript
// handle query collection
function queries() {
  var elm, coll;
  var ul, li;
  var form, fs, lg, p, lbl, inp;

  elm = d.find("queries");
  d.clear(elm);
  if(g.cj.collection.queries) {
    ul = d.node("ul");
    coll = g.cj.collection.queries;
    for(var query of coll) {
      li = d.node("li");
      form = d.node("form");
      form.action = query.href;
      form.className = query.rel;
      form.method = "get";
      form.onsubmit = httpQuery;
      fs = d.node("fieldset");
      lg = d.node("legend");
      lg.innerHTML = query.prompt + " ";
      d.push(lg,fs);
      for(var data of query.data) {
        p = d.input({prompt:data.prompt,name:data.name,value:data.value});
        d.push(p,fs);
      }
      p = d.node("p");
      inp = d.node("input");
      inp.type = "submit";
      d.push(inp,p);
      d.push(p,fs);
      d.push(fs,form);
      d.push(form,li);
      d.push(li,ul);
    }
    d.push(ul,elm);
  }
}
```
